

GE+ vAC/DC Full ePlus

Regenerative AC/DC Grid Emulator

The GE+ vAC/DC Full is the most complete and flexible Voltage Source, for AC and DC Test Platforms. Based on a Regenerative and Bidirectional power hardware, it is an essential laboratory device for testing and R&D applications in Renewable Energy Sources (PV, WT, CHP), grid connected devices, Smartgrids, Batteries, Electrical Vehicles and EV Chargers and Power HiL.

Regenerative Technology

Thanks to our bi-directional topology, the AC/DC Grid Emulator Converter are regenerative, resulting in a reduction of both the consumed energy during the tests and the power required from the electrical installation.

This technology allows us to work in both directions, as power generators or offering a consumption for the realization of all types of tests.

Main Applications

Electromobility

Smart Grids

Academic & RCP

IEC Testing

Photovoltaic

Industrial Test

Power HiL

Energy Storage System

Bidirectional and Regenerative

Clean grid current

THDi < 3% and PF > 0.98

13 Models

from 7.5kW to 160kW

Parallelization of units to increase the power

Generation of Worldwide Electrical Grids

3-phase/ 1-phase/ split phase/ Multichannel

Independent Phase Configuration of

voltage rms, phase angle, frequency and harmonics

Same Power in DC and AC

Generation of Disturbances

harmonics, interharmonics, subharmonics, voltage dips frequency variation, flicker

Disturbance Generation Editor

compatible with IEC, LVRT, SEMI-F47, CBEMA test standards

Intuitive User Interface

Modbus/Ethernet Open protocol, Labview drivers

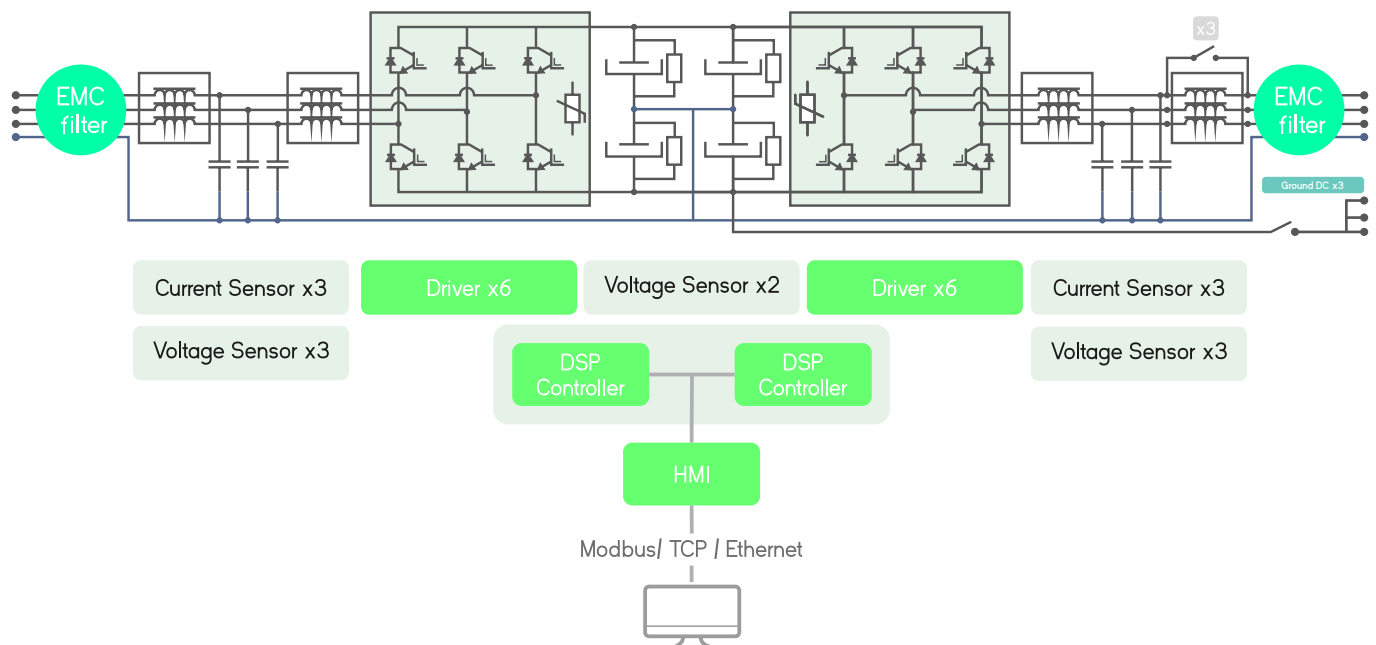

Bidirectional and Regenerative Hardware

The hardware platform is based on a Back-to-Back power conversion topology, formed by two IGBT-based power stages. The grid side stage is an Active Rectifier which produces clean sinusoidal currents with very low harmonic distortion and power factor close to one.

The EUT side stage can be configured for AC voltage source or AC current source or DC output. In AC, voltage/current are controlled by using state of the art digital Proportional-Resonant controllers. In DC, the three independent buck-boost bidirectional legs enable the separated control of three different DC voltages or currents.

Block Diagram

Local Interface

Analogue and Digital 10 ports

The isolated digital and analogue inputs/outputs permit the connection of the unit to External Controllers and Power Hardware in the Loop systems (option).

4.3" Touchscreen

Allows the local parameterization and command of the device, configuration of the communications link, plots the main signals and enables the local datalogging.

Safety First

The units integrate a local Emergency Stop pushbutton and two signals (input+ output) to be connected to the laboratory interlock system. Additionally, the digital outputs can be interfaced to safety tower lights.

Master/Slave

ePLUS is a modular platform enabling the master/slave connection of units with equal power.

Better than ever, the enhanced **Plus** family

What's better

MASTER/SLAVE CONNECTION

by using a fiber optics link to increase power/voltage capabilities:

GE in AC: can be connected in parallel

EL in AC: can be connected in parallel

B2C: can be connected in parallel, or series or both

FASTER

30kHz control loop frequency

MORE HARMONICS

50 per phase with 20 free-harmonics

DELTA LOAD

for the EL in AC mode

ADJUSTABLE DC TRANSIENT

controllers to improve stability of the system

OPTIMIZED RMS CALCULATION

for PV inverters anti-islanding test

SAME ELECTRICAL RATINGS

and SAME BANDWIDTH

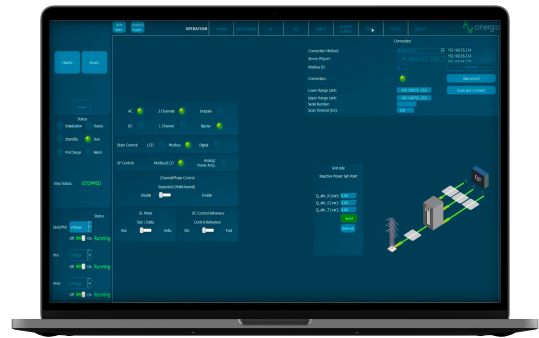

because the power platform does not change so robustness and ratings remain the same.

Software

The user interface used by CINERGIA devices has been developed by our R&D team, to offer total control of the device, with a comfortable and intuitive design. This allows us to take full advantage of the capabilities of the device, as well as the programming and execution of standardized or self-created tests.

GE Modes

AC Operation

From this panel, the user can set all AC parameters. Each phase can be independently configured: RMS current magnitude, phase delay, harmonics content, free-frequency harmonic and transition ramps. A plot shows the expected real-time waveform, the FFT representation and the numeric data: RMS, peak, CF and THD.

Harmonics

The device can control simultaneously the magnitude of the first 15 harmonics and one free harmonic per phase. The free one allows the generation of sub-harmonics, inter-harmonics and high frequency harmonics up to the 50th, setting both the magnitude and phase delay.

Parallel Mode

The device can be controlled in parallel mode where all phases are short-circuited internally. This mode it's suitable for single-phase applications. To increase the total power of the solution, the device can be connected in parallel* with multiple devices.

*For this connection contact us.

AC

Steps Mode

One of the most remarkable novelties of the new software is the steps functionality. Step test files are saved and executed by the DSP allowing deterministic timing with a resolution of 66µs. The user gains access to all registers of the device to create complex test sequences which run directly in the converter without the need of an external computer.

Disturbance Generation

The steps mode includes predefined easy-to-use test panels. The AC faults panel is a powerful yet intuitive editor which allows generating and configuring flicker. Specific profiles can be saved in .csv files, modified, and reused by importing an existing one.

IEC Testing

Optional

The last version of software includes a library supporting IEC standard for pre-compliance tests. The profiles defined in the standards are preloaded in the software for a user friendly execution and edition. Currently the following standards are available:

- IEC61000-4/11
- IEC61000-4/13
- IEC61000-4/14
- IEC61000-4/28

*It is mainly intended for pre-compliance testing. Contact us for further information.

DC

DC Operation

This panel allows the user to access all DC setpoints and limits. Thanks to the unique Multichannel feature, each phase can have a different Operation Mode: voltage, current, power, resistance and advanced DC applications. Transition ramps, voltage and current limits can be modified. The limits for sink and source operation are different for safer testing, specially in battery applications.

Sequence

The User Interface Software integrates a Sequence Editor to create automatic test sequences, save them for future use and import them in .csv files. A smart datalogger can be activated from the LCD of the unit to record automatically the resulting voltage and current measurements with a time resolution of 400 ms.

Multichannel

Enabling the Separated Channel Control converts the device in three functionally independent DC Bidirectional Power Supplies, sharing the common negative rail. Each channel can have a different status (ON, OFF, Warning, Alarm), Operation Mode (see Range and Specifications table), Setpoint, Ramp and Limits.

Battery Pack Tester

This functionality enables the user to precisely control the charge, discharge and cycling of a Battery. Basic parameters include the charge/discharge current, fast charge and floating voltages while Advanced parameters add Energy (Ah) and Time as transition conditions. Profiles for each Battery technology can be saved and imported in .CSV files.

Battery Emulation

The B2C+ integrates a mathematical model to emulate the voltage behaviour of a real battery pack. The output voltage will change as a function of the SOC and Current. By configuring the provided parameters, the voltage profile can be adjusted to match different technologies: Lilon, NiMH, NiCd, Pb, Flux, etc.

PV Panel Emulation

The PV Panel model is based on the single-diode equivalent circuit of a PV cell and the series-parallel connection of cells to form a panel. A Runtime functionality allows the simulation of a complete day by launching different irradiance and temperature setpoints from a .csv file, enabling the user burn-in and functional tests of PV Inverters.

GE+ vAC/DC Range & Specifications

Input side (GRID side)

AC Voltage

Rated: 3x400Vrms +Neutral+ Earth

Range: +15% / -20%

Rated AC Current

Depends on model (see Wiring Manual)

Frequency

48-62Hz

Current Harmonic Distortion

THDi < 3% at rated power

Current Power Factor

PF > 0.98 at rated power

Efficiency

≥ 89% (7.5 & 10), ≥ 91% (15 to 30), ≥ 92% (40 to 200)

Output side in DC (EUT side)

Terminals

Number: 4 (3 phases + 1 neutral)

Configuration of Channels

Unipolar 3-channels 2Q, independent setpoints per channel

Unipolar 1-channel 2Q, one global setpoint for all channels

Multichannel: 2Q, independent start/stop, operation mode and setpoints per channel (note: multichannel is an option for ≥ 80kVA)

Bipolar (4Q two independent setpoints)

Voltage (CV)

Range: 2Q: 20⁽¹⁾ to 750V (800V with High Voltage option)

4Q: 0 to +350V / 0 to -350 (+ rail / 0 / - rail, Bipolar configuration)

Setpoint Resolution: 10mV

Effective Resolution⁽²⁾: < 0.05% of FS⁽³⁾

Setpoint Accuracy⁽⁴⁾: ± 0.1% of FS⁽³⁾

Transient Time⁽⁵⁾: < 1ms (10% to 90% at a step to V_{rated})

Ripple⁽⁷⁾ (peak-peak): < 0.55% of FS⁽³⁾

Current Mode (CC)

Range: from 0 to ± 110% of I_{rated} (see models table)

Setpoint Resolution: 10mA

Effective Resolution⁽²⁾: < 0.05% of FS⁽³⁾ (< 0.1% models 7.5 & 10)

Setpoint Accuracy⁽⁴⁾: ± 0.2% of FS⁽³⁾

Transient Time⁽⁵⁾: < 1ms (10% to 90% at a step to I_{rated})

Ripple⁽⁷⁾ (peak-peak): < 0.7% of FS⁽³⁾

Power Mode (CP)

Range: from 0 to ± 200%⁽⁸⁾ of P_{rated} (see models table)

Derived current setpoint: P_{setpoint} / V_{measured}

Setpoint Resolution: 1W

Effective Resolution⁽²⁾: < 0.1% of FS⁽³⁾ (< 0.25% models 7.5 & 10)

Setpoint Accuracy⁽⁴⁾: ± 0.4% of FS⁽³⁾

Transient Time⁽⁵⁾: < 2.5ms (10% to 90% at a step to P_{rated})

Resistance Mode (CR)

Range: from 0.1 to 1000 Ohm

Derived current: V_{measured} / R_{setpoint}

Setpoint Resolution: 0.01 Ohm

Setpoint Accuracy⁽⁴⁾: ± 0.2% of FS⁽³⁾

Transient Time⁽⁵⁾: < 2ms (10% to 90% at a step to R_{rated})

Output side in AC (EUT side)

Terminals

Number: 4 (3 phases + 1 neutral)

Configuration of Channels

3 channels: 4Q, independent setpoints per phase

1 channel: 4Q, global setpoints for all phases (only in GE+)

Multichannel: 4Q, independent start/stop, alarm status and setpoints per phase (note: multichannel is an option for $\geq 80\text{kVA}$)

Output side in GE-AC

Voltage Mode (CV)

Peak: $\pm 400\text{V}$ phase-neutral

Range: $0^{(1)}$ to 277Vrms phase-neutral (295Vrms with HV option)
 $0^{(1)}$ to 480Vrms phase-phase (510Vrms with HV option)

THDv: $< 0.1\%$ rated linear load at 230Vrms , $50/60\text{Hz}$
 $< 0.9\%$ rated non linear load $\text{CF}=3$ at 230Vrms , $50/60\text{Hz}$

Setpoint Resolution: 10mVrms

Effective Resolution⁽²⁾: $< 0.05\%$ of $\text{FS}^{(3)}$

Setpoint Accuracy⁽⁴⁾: $< \pm 0.1\%$ of $\text{FS}^{(3)}$

Transient Time⁽⁵⁾: $< 1.5\text{ms}$ (10% to 90% at a step to V_{rated})

Ripple⁽⁷⁾ (peak-peak): $< 0.55\%$ of $\text{FS}^{(3)}$

Enhanced

Harmonics

Range: up to 50th (at $50/60\text{Hz}$ fundamental)

50 independent harmonics per phase:

20 free programmable frequency and phase from 0.1 to 50 times f_0
30 fixed frequency

Harmonics content: $V \cdot f < 46000$ (with current derating)

Setpoint Accuracy⁽⁴⁾: same as voltage accuracy

Small Signal Bandwidth: up to $5000\text{Hz}^{(9)}$

Transient Time⁽⁵⁾: $< 2\text{ms}$ (10% to 90% at a step change)

Frequency

Fundamental Frequency Range: 10 to 100Hz (up to 400Hz option)

Small Signal Bandwidth: up to $5000\text{Hz}^{(9)}$

Resolution: 1mHz

Phase Angle

Range: 0 to 360°

Resolution: 0.01°

Protections

Overvoltage (peak, rms), Overcurrent (peak, rms), Overload
Shortcircuit, Emergency Stop, Watchdog, Heart Beat, Output
Contactar, Wrong Configuration
Alarms and Limits are user configurable and can be saved in a
password protected EEPROM

Mesurements ⁽⁶⁾

Grid Voltage (rms), Current (rms), Power (P,O) and Frequency
Output Voltage (rms, avg), Current (rms, avg), Power (P,O) and Frequency
Heatsink Temperatures (x2) and DC Link Voltage
Datalogging available through FTP connection

Ambient

Operating temperature⁽⁹⁾ : 5–40°C
Relative Humidity: up to 95%, non-condensing
Cooling: Forced air
Acoustic noise at 1m: < 52dB(A)(7.5 to 60), < 65dB(A)(80 to 120), < 70dB(A)(160 and 200)

Standards

CE Marking
Operation and Safety: EN-50178, EN-62040-1
EMC: EN-62040-2
RoHS

All specifications are subject to change without notice.

Options

Choose your options:

- Three channel mode: allows different operation mode start/stop/reset per channel (included in all models from 7.5 to 60, both included)
- 30kHz Switching Frequency: only available for models 15 (derated to 7.5kW), 20 (derated to 7.5kW) and 30 (derated to 10kW)
- Isolation monitor (advised for IT systems)
- Low voltage ripple capacitance
- Anti-islanding monitor (only advised in net injection to the grid and following local regulations)
- High Voltage (HV): voltage up to 295Vrms phase-neutral
- in AC up to 800V in DC
- RS485
- Battery Emulation
- Battery Test
- PV Panel Emulation
- Predefined Tests: LVRT, IEC 61000-4-11, 4-13, 4-14, 4-28 (consult us for specific Test)

All specifications are subject to change without notice.

1. Minimum voltage setpoint is 0V in DC. The recommended minimum setpoint for long-term use is 20Vrms in AC and 20V in DC,
2. Effective resolution measured with a 400ms window
3. FS Range of voltage is 800V (with High Voltage option)
FS Range of current is 2·13 · Irated I (see models table)
FS Range of power is 2·1200% · Prated I (see models table)
4. Accuracies are valid for settings above 10% of FS
5. Measured with the rated resistive load and high-dynamics controllers configuration.
6. Accuracy of measurements is ±0.1% of FS for rms voltage, ±0.2% of FS for rms current, ±0.4% of FS for active power (valid only above 10% of FS)
7. Consult us for lower voltage/current ripple requirements
8. Rated power figures are given at 20 °C
9. The maximum output voltage depends on frequency following $V \cdot f < 46000$
